Press release

Low weight ARCHETTI TECHNOLOGY towbars for light commercial vehicles now with new C.U.L.T. series

ARCHETTI TECHNOLOGY reinvent the towbar for light commercial vehicles using an extremely new concept call C.U.L.T. (Composite Ultra Light Towbar)

ARCHETTI TECHNOLOGY always active in design and production of low weight towbars for light commercial vehicles, considering the new challenge to produce parts of vehicles always more and more lighter that can results in reduced fuel consumption and environmental pollution has developed a total new concept of towbar.

This new design take in consideration the optimal use of high grade steel and with a really totally new approach to the design of towbars offer to the users a lighter product on the market with the same or better performances **saving 50%** of the actual towbar weight.

The product is shaped considering the visual impact on the vehicle because of the more attractive design of all the new commercial vehicles specially the VAN versions.

The possibility to combine different type of thickness as well as different materials make this product very flexible in terms of weight and performances.

The actual offer of products cover the application on Mercedes Sprinter and IVECO Daily vehicles but the product is in rapid development and soon will be available for all the main types of commercial vehicles.
